### Fund manager's commentary

Financial markets last quarter of 2023 delivered a much-needed Christmas present. Growing investor sentiment that central banks will cut interest rates sooner in 2024 than previously expected resulted in great returns for fixed income. A weaker dollar and continuously decreasing inflation also contributed to trends in debt investments. The top performing sectors were high yield and Eurozone government debt which delivered 8.21% and 7.19% returns accordingly.

The shares and weightings of the fund's benchmark index are selected in accordance with the investment strategy set out in the rules of the fund, but the fund manager may make investment decisions at his own discretion. The value of the investment may fluctuate up and down. You may earn less than you have invested. Past performance is no guarantee of future results.
