1. Average pension fund return \*\*  
2. Average return of the benchmark \*\*  
3. Standard deviation of change in unit value \*\*\*

\* Past performance provides no guarantee of future performance.  
\*\* The average change in the unit value and in the value of the benchmark over the last three, five, ten years is calculated as the geometric average of the annual changes in the unit value and changes in the value of the benchmark.  
\*\*\* Standard deviation is a statistical risk indicator that shows how strongly changes in the value of a unit fluctuate compared to their average change. The standard deviation of the change in the unit value over the last three, five, ten years and since inception is the annual standard deviation of the change in the unit value for the specified period.

Fund manager’s commentary

The last quarter of 2024 brought positive returns to all pension funds without exception. In November, with the election of Trump as U.S. president—who promised to boost business and raise import tariffs—expectations of future inflation increased and consequently, interest rates rose, while risky assets became more expensive. Over the fourth quarter, the overall index of developed-country shares, expressed in euros, rose by 7.6%. The global bond index fell by 1.4% due to rising interest rates, but riskier, high-yield corporate bond index, rose by 2.0%. Despite the decline in most bond prices, conservative Luminor pension funds generated positive returns during the quarter.
