The standard deviation of the change in the unit value over the last three, five, ten years and since inception is the annual standard deviation of the change in the unit value for the specified period.

Fund manager's commentary

The tendencies of the first quarter persisted throughout the second quarter as well. Global equities buoyed by strong economic growth provided robust returns. The global fixed income market continued to underperform and had a negative return for the quarter – along with greater consumption stickier inflation for a longer time was priced in. High yield bonds were the best sub-asset class with 1.4 % gain in the quarter. Meanwhile European investment grade government and corporate index decreased by 0.6 % despite the first rate cut from the European Central Bank.

The shares and weightings of the fund's benchmark index are selected in accordance with the investment strategy set out in the rules of the fund, but the fund manager may make investment decisions at his own discretion. The value of the investment may fluctuate up and down. You may earn less than you have invested. Past performance is no guarantee of future results.
