Example of the annual rate calculation on the overall credit price (Visa Classic)

If the Bank issued EUR 1,500 credit in the payment card account for 36 months' period, the overall amount payable by the borrower would make EUR 2,317.17 and the overall annual rate of the credit price would make 19.69%.

The calculations include the interest paid during the credit period (17% fixed annual interest rate was used for the calculation), card issue fee of EUR 3, and payment card administration fee of EUR 1.30 per month.

The overall annual rate of the credit price and the overall amount payable by the borrower is calculated assuming that the total Credit Limit is used on the Credit Limit issue day and is fully repaid on the last effective day of the agreement and the interest for using the Credit Limit is paid every month.
